

SOUTHERN POWER DISTRIBUTION COMPANY OF A.P. LIMITED

19-13-65/A, Vidyut Nilayam, Srinivasapuram, Tirupati (www.apspdcl.in)

From

The Chief General Manager, RAC & IPC, APSPDCL, 19-13-65/A, Vidyut Nilayam, Srinivasapuram, Tirupati – 517501. To

Sri M.Venugopala Rao, Senior Journalist and Convener of Centre for Power Studies, H.No.1-100/MP/101, Monarch Prestige, Journalists' Colony, Gopanpally, Serilingampally Mandal, Hyderabad-32.

Lr No.CGM/RAC&IPC/SPDCL/TPT/GM/RAC/F.ARR.Rep.(4) /D.No.84 /24 dt. -01-2024

Sir.

Sub:- APSPDCL/TPT – RAC – Replies to objections raised by Sri M. Venugopala Rao, Hyderabad on ARR for Distribution Business - Regarding.

Ref:- Party's representation received dt.23-12-2023

With references to the public notice dated 10th December, 2023, inviting views, objections and suggestions on the subject proposals, we are submitting the following points for the consideration of the Hon'ble Commission:

- 1. The DISCOMs have claimed that they have submitted their resource plan to the Commission on 30.4.2023 for the 5th control period. Public hearings were conducted by the Hon'ble Commission on the said resource plans and other plans of the licensees for the 5th and 6th control periods and orders were reserved. Since there is avoidable delay in holding public hearings and issuing its orders by the Hon'ble Commission, it is obvious that the DISCOMs have filed the subject petitions on the 30th November, 2023 based on their plans for the 5th control period, not on the basis of the said plans approved by the Commission. The proposals of the licensees for the 5th control period, as approved by the Commission, need to be factored in the RSTO for the FY 2024-25 for retail supply business of the DISCOMs. Interested stakeholders also are constrained to make their submissions on the subject petitions, without examining the orders of the Commission on the proposals and plans of the licensees for the 5th control period.
- 2. The DISCOMs have requested the Hon'ble Commission "to exercise suitable caution and recognise the current level of performance of the licensee, before fixing up performance benchmarks. As an example, the licensees which have already achieved significant level of efficiencies say in loss reduction cannot be expected to carry forward the same trend in the fourth control period, with the same loss reduction as the initial state of performance of the licensee. As such, recognising the different socio-economic and geographical conditions of the four distribution licensees, the licensee earnestly submits that there should be sufficient flexibility in deriving different levels of norms. For example, different norms for O&M costs have to be allowed for base values for each Discom considering different consumer mix, assets and employee." Similarly, the DISCOMs should have filed details of their actual performance during the 4th control period, the reasons for variations, if any, in what is determined by the Commission and what is achieved by them during the control period. That is also necessary, along with projections of the DISCOMs for the 5th control period, to take a realistic view on their requirements and proposals.

Reply: The licensee computed Employee expense and A&G expense norms by considering the relevant expenses from previous five years' audited reports. Further, the 4th control period (until FY 21-22) actual capital expenses were already submitted to the Hon'ble commission in the filings of resource plan for 5th and 6th control periods. Further, the

licensee is getting approval from the Hon'ble APERC for the Capital expense proposals other than those approved in MYT order to the Hon'ble APERC before executing the works. The reasons for variations thereof with regard to expense items will be submitted to the Hon'ble APERC in the true-up petition for distribution business to be filed after the completion of the 4th control period. Further, the licensee is submitting the requisite data sought by the Hon'ble APERC as and when it seeks data.

3. We have been requesting the successive Commissions to dispense with the system of MYT and adopt annual system for the businesses of the licensees for the reasons given by us. However, the successive Commissions have been adopting the MYT system on the ground that it is mandatory as per the EA, 2003, national policies and applicable regulations. In the RSTO for 2023-24, the Hon'ble Commission has made it clear that, as per Regulation 4 of 2005, the DISCOMs have to file ARR along with FPT with the Commission for determination of Tariff for (a) Distribution business (wheeling charges) and (b) retail supply business, for period of 5 years (called control period). The Commission has also pointed out that "it is reiterated that there are divergent views on multiyear tariffs for retail supply business. Only two or three States in the country have issued multiyear tariffs for retail supply businesses. The Commission has been strictly following the MYT principles for the determination of tariffs in respect of generation, transmission, and distribution businesses. In view of the uncertainty associated with various factors as explained supra by the DISCOMs including the uncertainty associated with the subsidy amounts to be extended by GoAP to various categories of consumers, the Commission has permitted the DISCOMs to submit their filings on annual basis for their retail supply businesses upto FY 2022-23 as this will not affect any stakeholder. FY 2023-24 being the last year in the control period, the Commission has granted permission similar to the earlier years." Irrespective of divergent views on MYTs, that the successive Commissions have been allowing, and rightly, the DISCOMs to file their ARR and tariff proposals for retail supply business on annual basis, i.e., deviating from the applicable regulation for valid reasons, makes it clear that the Hon'ble Commission has discretionary power to deviate from the applicable regulation in the case of filing of MYT petitions by the licensees. Without repeating our submissions underlining the need for dispensing with the system of MYT, we request the Hon'ble Commission to review the performance of the licensees relating to the MYT orders given by the Commission, as well as their true-up/true-down claims, on annual basis and issue its orders, after holding public hearings. In the immediate and long-term context, such annual exercises would facilitate corrections, if required, annually, based on what is determined by the Commission in the MYT orders vs actual performance of the licensees for the FY concerned. It will also facilitate avoidance of accumulation of claims of true-up/true-down for a control period of five years. Such an exercise also will facilitate taking into consideration of actual performance of the licensees during the control period concerned, while examining their MYT proposals and issuing MYT orders for the next control period in time.

Reply: Under the purview of Hon'ble APERC.

4. For the 5th control period, the three DISCOMs have projected the following capital expenditure for their distribution business:

 SPDCL
 Rs.20,087 crore

 CPDCL
 9,318

 EPDCL
 16,869

 TOTAL
 Rs.46,274 crore

Compared to the capital investment of Rs.13,548 crore - Rs. 9,239 crore for APSPDCL and Rs.4,309 crore for APEPDCL - approved by the Commission for the 4th control period, the projected capital expenditure for the 5th control period is higher by 341.56%. The DISCOMs proposed a capital investment of Rs.20,150 crore - Rs.13,937 crore by SPDCL and Rs.6,213 crore by EPDCL - for the 4th control period, and the Commission approved Rs.13,548 crore only, i.e., reduced the proposed investment by 67.24%. The DISCOMs should have submitted their actual capital expenditure for the 4th control period, with reasons for variations and subsequent approvals,

if any, given by the Commission for additional capital investment during the control period. It would have facilitated a realistic appraisal of requirements of the DISCOMs for their investment plans for the 5th control period.

TAXABLE PROPERTY.

5. The DISCOMs have projected requirement of energy and peak demand at state level for the 5th control period as hereunder:

Parameters	FY23	FY24	FY25	FY26	FY27	FY28	FY29	CAGR
Energy Req MU	72400	79472	85365	90924	99731	105179	111378	7.44%
Peak Demand MW	12293	13746	15226	16256	17831	18805	19913	8.37%

Compared to requirement of energy for the last year of the 4th control period 2023-24 of 79472 MU, the projected requirement of the same for the last year of the 5th control period 2028-29 of 113378 MU works out to an increase of 65%. Similarly, compared to peak demand of 13746 MW for 2023-24, the projected peak demand for 2028-29 of 19913 MW works out to an increase of 69%. Compared to the growth rates of energy required and peak demand at state level for the 5th control period, the growth rate of projected capital investment is abnormally high. Operation and maintenance and expansion of distribution network have been a regular process during all the control periods and the costs thereof also cover the rate of inflation. There has been serious concern in knowledgeable quarters over the way costs of various schemes and works of distribution system have been inflated. That the Hon'ble Commission had drastically reduced the projected capital cost for distribution business of the DISCOMs for the 4th control period is a testimony to it. For example, while the cost of a single phase smart meter for 2018-19 was considered by APSPDCL as Rs.5000/-, the Hon'ble Commission reduced it to Rs.2500/-. The Commission pointed out, in the order for wheeling tariff for distribution business for the 4th control, that the licensees failed to comply with its directions to submit comprehensive proposals on various issues relating to the capital investment for reducing their projected capital investment during the 4th control period.

- Reply (4 & 5): The capital investment projected for 5th control period is higher due to implementation of schemes such as RDSS involving smart prepaid metering for consumers and systems, loss reduction, system strengthening, agl DBT scheme etc., in addition to the regular capital investment to cater to the load growth.
- 6. How tender process for purchasing materials by the DISCOMs is being manipulated can be understood from two letters dated 15.9.2023 and 25.9.2023 written by prestigious public sector undertaking BHEL-R&D to APSPDCL, protesting against its disqualification for supply of 11 kv feeders VCBs with CT and CRPs. Copies of the said letters, which are self-explanatory, are enclosed. I request the Hon'ble Commission to call for relevant documents pertaining to this issue from APSPDCL, examine the same, give appropriate directions to the DISCOM and make all the particulars public.

Reply: Letter was already addressed to M/s BHEL duly mentioning the reasons for non consideration of their bid.

7. Regarding purchase of pre-paid meters, the DISCOMs have maintained, in their replies given to our submissions on long-term load forecast, procurement plan, etc., for the 5th and 6th control periods, that the Hon'ble judge of judicial preview has issued proceedings duly considering the objections and suggestions from the public and prospective bidders. The so-called judicial preview cannot sanctify the bidding process. A.P. Green Energy Corporation Ltd. went through the same judicial preview process when it floated tenders for 6400 MW of solar power. The Hon'ble High Court set aside that bidding process on the grounds raised by another private corporate house. On the direction of the GoAP, APGECL withdrew its appeal before the division bench of the High Court, may be, due to the apprehension that the appeal would be set aside. It shows how ineffective the so-called judicial preview was. When Hon'ble APERC is the appropriate authority for seeking approval for any changes in the process of bidding and its terms and conditions, the arrangement of so-called judicial preview, bypassing the Hon'ble Commission, is questionable and superfluous.

The so-called judicial preview cannot come in the way of the Hon'ble Commission for exercising its legitimate authority to examine the whole issue of purchasing pre-paid meters thoroughly, making the details public, holding public hearings on the same and taking appropriate decisions and issuing directions.

Reply: Approval was accorded for investment proposal for Smart metering works by the Hon'ble Commission. As per the GO Ms. No. 69 Dt 28.08.2019 issued by GoAP, tender documents were submitted for Judicial preview as per procedure and also documents were kept in judicial preview website for offer public opinion/objections for taking appropriate decision in the judicial preview. Accordingly Judicial preview approval has been issued.

8. APSPDCL has informed (and given information in the subject proposals) that for 11 lakh agriculture services under the direct benefit transfer (DBT) scheme, the GoAP has accorded administrative sanction for Rs.3369 crore on 5.12.2022. After floating open tenders on 22.12.2022, the GoAP has revised the administrative sanction to Rs.4068.08 crore for the same scheme on 21.6.2023. SPDCL has informed that it concluded agreements for AMISP (Advanced metering infrastructure service provider - smart metering works) under RDSS for supply, configuration and integration of smart meters with operation and maintenance period of 93 months. Pre-paid smart meters will be fixed for Govt. Services, commercial, industrial and domestic service connections in a phased manner under RDSS scheme accordingly, it has explained. Similarly, APCPDCL has informed that for 5 lakh agriculture services under DBT scheme, the GoP has accorded administrative sanction for Rs.1531.36 crore on 5.12.2022 and revised it to Rs.1864.54 crore on 21.6.2023, i..e, enhanced by Rs.333.18 crore, i.e., by 21.75%. In its replies to our submissions, APEPDCL has informed that for 2.58 lakh agricultural pump sets, GoAP has accorded administrative sanction on 5.12.2022, but it has avoided to reveal the amount for which the said sanction is accorded. GoAP has accorded revised administrative sanction on 21.6.2023 for a sum of RS.956.41 crore for the same. The DISCOMs have not explained as to what warranted revision of the administrative sanction to enhance it by Rs.699.08 crore, i.e., by 20.75%, in the case of SPDCL and by Rs.333.18 crore, i.e., by 21.75%, in the case of CPDCL within a span of six months. EPDCL has to reveal the amount for which the first administrative sanction was accorded by the GoAP...

Reply: The Government of Andhra Pradesh has issued orders vide GO.MS. No.22 dt 01.09.2020, for implementation of "YSR Uchita Vyavasaya Vidyut Pathakam" by installation of Smart Energy Meters to all the Agriculture Services in the APSPDCL.

Based on the monthly consumption, agriculture subsidy amount will be credited to the farmer's bank accounts and intern the same amount will be transferred automatically to DISCOM's Account under Direct Beneficiary Transfer (DBT) Scheme. The cost of the project will be borne by the GoAP in the form of subsidy along with electricity bills and there will be no burden on the farmers. The GoAP has issued administrative sanction vide GO.RT.No.148, dt. 05.12.2022 for providing of smart meters along with allied materials to all Agl services in the DISCOM. APSPDCL has invited open tenders in AP-e procurement portal and discovered L1 bidder in the tendering process for providing smart meters to all Agl services with allied materials. Further, APSPDCL has requested the GoAP for according revised administrative sanction for discovered price in the tendering process. Accordingly, the GoAP has issued revised administrative sanction vide G.O.Rt.No.67, dt.21.06.2023.

		Administration Sanction			
SI.No	Description	05.12.2022	21.06.2023		
1	DBT Scheme - Allied Materials	1,353.09	1,466.83		
2	DBT Scheme - Smart Meters	2015.91	2601.25		
	Total	3,369.00	4,068.08		

Due to COVID Pandemic situation and as supply chain management was worst affected due to restrictions imposed, there is a steep hike in raw material prices. The material and labour rates have increased drastically during the last 2 years. As such based on the prevailing

market rates and increased labour rates there is an increase in quoted rates of the bidders compared to that of the sanctioned cost for the same sanctioned quantities. The GoAP has introduced the scheme prestigiously for assessing actual agricultural consumption in the state under DBT scheme and that the funds required for the implementation project will be paid by the Govt., in the form of subsidy along with the electricity bills to all the DISCOMs.

9. Neither the governments, nor the Central Electricity Authority, nor the DISCOMs, nor ERCs have any power to direct installation of pre-paid meters, without willingness of the consumers concerned to take the same. Section 47(5) of the Electricity Act, 2003, says, "A distribution licensee shall not be entitled to require security in pursuance of clause (a) of sub-section (1) if the person requiring the supply is prepared to take the supply through a pre-payment meter." Directions or orders of the authorities cannot override the applicable law. When the Hon'ble Commission had given its approval to the DISCOMs for procurement of pre-paid meters, was it given with any conditions? If consumers do not opt for pre-paid meters, what will the DISCOMs do with the pre-paid meters purchased by them? EPDCL has replied that the cost to be collected from the consumers will be determined by the Hon'ble Commission on submission of proposal of meters, implying that no such proposal was submitted by the DISCOMs and that the Commission had given its approval for procurement of pre-paid meters and related materials without considering that point. CMD of APCPDCL has reportedly said that a charge of Rs.86 per month for 93 months would be collected from each consumer for installing these meters (The Hindu: August 26, 2023).

Reply: As per the guidelines issued for providing smart/prepaid meters to system metering and consumer metering under RDSS, APSPDCL invited open tenders through AP-e procurement portal for providing Smart meters to system metering and pre-paid smart meters to consumer metering. Initially APSPDCL decided to provide pre-paid smart meters to Govt., services and then for commercial, industrial & domestic (>200 U). Accordingly, APSPDCL and AMISP (Contract Agency) are both scheduled for conducting consumer awareness programme for collecting willing ness forms from the consumers where pre-paid smart meters are going to be installed.

Further, the Honourable APERC accorded approval vide Letter No. Engg/JD (Engg)/E-500-132/D.No.559/2023, Dt 03.04.2023 for providing pre-paid smart meters to consumers in the phased manner. The approval is subject to the following conditions.

 The works shall be executed strictly in accordance wither the guidelines issued / conditions stipulated by the Govt. of India under RDSS in order to get grant

b) The DISCOM shall not spend more than the approved amounts by Gol for each item of the works in any from whatsoever

c) In any FY during 2022-23 & 2024-25, if the DISCOM fails to achieve the targets fixed under RDSS and falls to get grant, the same may be submitted to the Commission to take an appropriate decision

d) The APSPDCL shall adhere to the DPR cost for which the scheme is prepared duly excluding the agricultural services as GoAP issued GoMs.No.22, dt.01-09-2020 to bear the cost of providing metering to agricultural services under DBT scheme, they should limit the project cost to the DPR amount only in all respects.

And also, to avoid ambiguity with the functioning of pre-paid smart meters among the consumers the existing meter will be kept in parallel to pre-paid smart meters as a check meter. APSPDCL will followed directions given by the Hon'ble commission in respect of smart pre-paid meters time to time.

10. As per the information furnished by the DISCOMs, only three companies -1. Shirdi Sai Electricals, Ltd., YSR Kadapa district, 2 Genus Power Solutions Private Ltd., Noida, UP, and 3.Adani Transmission Ltd., Ahmedabad, Gujarat, participated in the bidding for supply of pre-paid and other smart meters. They have not furnished the information as to how many companies participated in

the pre-bid meetings. As per information furnished by EPDCL, Only Shirdi Sai and Adani were qualified in the technical bid opened on 17.1.2023. In the price bid opened on 28.2.2023, Adani Transmission emerged L-1 bid quoting a contract value of Rs.1807.009 crore. After reverse bidding, Adani quoted Rs.1526.92 crore and after negotiations, the contract value was Rs.1045.34 crore. In other words, Adani reduced the contracted value by Rs.761.669 crore compared to the amount quoted in the price bid, i.e., reduced it by 41.15%.

11. As per the information furnished by APSPDCL, Adani quoted Rs.2288.25 crore in the price bid. After reverse tendering, it quoted Rs.1990.78 crore. After negotiations, contracted value was Rs.1386.93 crore. In other words, Adani reduced the contracted value by Rs.901.32 crore compared to the amount quoted in the price bid, i.e., reduced it by 45.27%.

Reply (10 & 11): The following companies participated for pre bid meeting conducted on 17.12.2022 in respect of AMISP for smart metering project tender in APSPDCL under RDSS

SI. No	Firm Name
1	HPL
2	India Smart Grid Forum
3	BCITS Pvt Ltd
4	Secure Meters Ltd
5	Monti Carlo
6	Vijay Electricals Ltd
7	HLT Electricals Ltd
8	Shirdi Sai Electricals Ltd

The following firms participated in the bidding

S. No.	Name of the firm participated
1	M/s Shirdi Sai Electrical Limited, kadapa
2	M/s. Genus Power Solutions Private Limited, Noida
3	M/s Adani Transmission Limited, Ahmadabad

Finally, M/s Adani Transmission Limited, Ahmadabad was quoted lowest price and work was awarded after final negotiation of price.

12. APCPDCL has not provided details of price bid values, values after reverse tendering and values for which contract was awarded. It has simply sent cost analysis report of a private consultant. Neither the DISCOMs, nor the reports of their private consultant, have made it clear whether the contracts for purchase of pre-paid meters and their maintenance are already awarded or not and if awarded at what price per meter for each category of meter and annual maintenance charges per meter.

Reply: Pertains to APCPDCL

13. The above details show how exorbitant the contract values quoted by Adani in the price bids are. They also indicate that the awarded contract value includes profit. By implication, it is evident that Shirdi Sai quoted contract values in the price bids more than what were quoted by Adani. It indicates that the bidding process was manipulated to show apparently that there was competitive bidding and that the DISCOMs negotiated efficiently to get the quoted contract value reduced by 41.15% by L-1 bidder. In the process a crony capitalist group is favoured.

Reply: The smart metering tenders were floated through AP-e procurement as per the guidelines of RDSS. The price quoted by the bidders are as per their capacity. The tendering

process is a systematic procedure adopted by the AP-e procurement portal. DISOCM negotiated the lowest quoted price by the L1 bidder to get the competitive price. The discovered lowest price by the L1 bidder is already communicated to the M/s PFC Ltd, New Delhi (Nodal Agency).

14. The reports of cost analysis made by a private consultant "Advisor" engaged by the DISCOMs show that a number of companies participated in the biddings relating to purchase of pre-paid meters by several other states. They are: Apraava Energy Private Limited, Genus Power Infra Limited, Hi-Print Metering Solutions Pvt. Ltd. (Genus). Adani Transmission Limited, Intellismart Infra Private Limited, Tata Power Company Limited, GMR Mining & Energy Private Limited, NCC Ltd., and Secure Meters. Shirdi Sai Electricals Ltd. did not figure in the list of companies who participated in the biddings floated by other states. It can be presumed that Shirdi Sai is not a serious bidder in the tenders floated by AP DISCOMs in view of the fact that it must have quoted much higher contract value exceeding the very high contract value quoted by L I in the price bid. That Shirdi Sai did not participate in reverse tendering and later in negotiations with the DISCOMs underlines need for examining what those terms and conditions were. Even if they participated, those details are not furnished by the DISCOMs. It is intriguing as to why only three companies participated in the bidding floated by AP DISCOMs. What were the terms and conditions for bidding that went through the so-called judicial preview and whether any changes have been made later before floating the tenders need to be examined. That several other companies in the country did not participate in the bidding indicates that the terms and conditions and the process of bidding were skewed to avoid their participation. Or, is it that the situation in the state is not conducive in politico-corporatebureaucratic terms to other companies to participate in the bidding, but conducive only to crony capitalists being pampered by the governments at the centre and in the state? Needless to say that terms and conditions of bidding should give scope for wider participation of bidders in the country to ensure real competition and the benefit of competitive prices and charges.

Reply: APSPDCL has invited open tenders through AP-e procurement portal for providing smart meters to system metering and pre-paid smart meters to consumer metering as per the guidelines issued by the MoP/Gol under RDSS. Prior to floating of the tender, the bidding document was prepared in line with Standard Bidding Document (SBD) published by REC and obtained clearance from Judicial preview without making any changes.

Further, tender notice was published in newspapers (Regional & National) for giving wide publicity for participation of a more number of bidders for competitive prices. The list of participants mentioned in the above are eligible if they are match the eligibility criteria as per the bid document and they have liberty to participate in open tendering. And also APSPDCL conducted pre bid meeting with following list of companies.

SI. No	Firm Name					
1	HPL					
2	India Smart Grid Forum					
3	BCITS Pvt Ltd					
4	Secure Meters Ltd					
5	Monti Carlo					
6	Vijay Electricals Ltd					
7	HLT Electricals Ltd					
8	Shirdi Sai Electricals Ltd					
9	KPMG India					

15. The total consumers in the state are 1,96,78,976, as per the information furnished by the DISCOMs. Under phases I and II, the DISCOMs are installing pre-paid meters to 38,63,537 service connections. As per the report of the private consultant, the weighted average cost of pre-paid meters in A.P. works out to R.13,578 to Rs14319, whereas the same works out for other states to Rs.12047 to Rs.12713. Prices worked out under three methods are different. Going by the three

methods based on which the prices are worked out in the said report are higher than the weighted average cost discovered in other states. What are the rates for which the DISCOMs are awarding the contract is not mentioned specifically.

Reply: APSPDCL has programmed to roll out 9.86 lakh of pre-paid smart meters to the consumers under Phase-I. The total single phase pre-paid smart meters being provided for 6.2 lakh of consumers (74%) @ Rs. 8,928/-. The remaining meters are 3-Phase meters of CT meters, HT meters, Feeder meters & DT meters, whose meter cost includes cost of CTs, PTs, cables & sundries and the average meter cost come to Rs. 13,625/-

16. The charges for maintenance per meter per month are higher. No comparison with the present expenditure for maintenance of post-paid meters is shown. Under the present post-paid arrangement, meter reading is being taken every month and bills are being issued. For D-list operations, that is, disconnecting service connections for delay in paying bills and reconnecting them, the DISCOMs have been collecting applicable charges from the consumers. Therefore, under the pre-paid system, the question of saving to the DISCOMs does not arise, because the DSCOMs are not bearing any expenditure, excepting collecting charges applicable from the consumers. Under the post-paid arrangement, the DISCOMs are collecting security deposits from the consumers equivalent to billing for two to three months and collecting additional security deposit as and when the consumption exceeds the contracted capacity. At the same time, interest on security deposits is being paid to consumers. The assumption that under the pre-paid arrangement, there will be saving of interest to the DISCOMs implies that no interest will be paid to the consumers for the amounts pre-paid, while the DISCOMs get rebate for paying bills before due date to generators for power supplied. Under the prepaid arrangement, the DISCOMs get benefit at the cost of consumers. The grant being given by the GoI under RDSS for installing pre-paid meters is a one-time affair. After useful life span of the pre-paid meters expires, apart from bearing higher burden for their maintenance during the proposed 93 months, the consumers will be compelled to bear repetitive burdens for replacing old meters with new meters periodically. The proposed prepaid arrangement would impose additional burdens on the consumers. Regarding computation of corporate overheads, installation charges and O&M expenses to be paid to AMISP, it is made clear in the report of the private consultant that "while the actual compensation for the above may vary across the levels, we have considered only allocated cost for computations." In other words, the maintenance charges estimated are not final and may increase further.

Reply: The Discom is in the process of filing the provisions regarding rebate/ incentives, security deposits, treatment of arrears and billing before the Hon'ble APERC

17. Since the entire maintenance of the system of pre-paid arrangement will be entrusted to a private company, they will have access to all the information relating to various categories of consumers. As proposed by the GoI, when private companies are allowed to take up power distribution in areas of their choice, the information available with the private company which operates and maintains the entire pre-paid system will help the private DISCOMs for cherry-picking. Adani group has already entered into the distribution and transmission business also elsewhere in the country and will continue to do so. Adani Transmission Limited and Bosch Global Software Technologies Private Limited, Bangalore, have entered into a consortium agreement on 8.12.2022 and this consortium is the "selected bidder". As per available information, not furnished by the DISCOMs, the latter are entering into agreements for appointment of Advanced Metering Infrastructure (AMI) Service Provider (AMISP) for smart pre-paid metering by replacing the existing meters to all government, domestic (confining to Amrut Cities), commercial and industrial consumers (excluding agriculture) and to all the 33 KV& 11 KV feeders and distribution transformers with 25 KVA and above rating in the districts within the jurisdiction of the DISCOM concerned in TOTEX mode on DBFOOT basis. Adani Transmission Step Seven Limited is the AMISP for the purpose of this agreement. The DISCOMs have not made it clear whether they have entered into the said agreement and not revealed the terms and conditions therein.

Reply: M/s Adani Transmission Limited, Ahmadabad has selected for "Appointment of Advanced Metering Infrastructure Service Provider (AMISP) for Smart Prepaid Metering and System metering by replacing the existing meters to all Govt., Commercial, Industrial & Domestic (>200 U) Consumers (excluding Agriculture) and to all the 33KV & 11KV Feeders and Distribution Transformers with 25KVA and above rating, in the erstwhile revenue districts of Nellore, Chittoor, Kadapa, Anantapuram & Kurnool within the Jurisdiction of the APSPDCL in TOTEX mode on DBFOOT basis" under RDSS Scheme.

Accordingly, APSPDCL has entered into agreement for providing of smart meters/pre-paid smart meters for system metering/consumer metering including O&M period of 93 months as per the terms and conditions therein.

18. In its directive No.26, the Hon'ble Commission has stated that "regarding the material procurement at comparatively higher rates, the DISCOMs are directed to apprise the Commission of the rice at which they procured the important items such as DTRs, Power Transformers, conductors, poles, etc during the last year with the comparison of the rates at which the utilities in neighbouring stats procured the same during the same period (last year) within 45 days from the release of this Order for passing appropriate directions in this regard." The observation of the Hon'ble Commission about material procurement at comparatively higher rates must have been made based on information available to it or considered by it. In response to the same, APCPDCL has given data relating to different items comparing rates at which TSDISCOMs procured the same materials partially. No comparison is made with other neighbouring states. Even the limited data given by CPDCL confirm that compared to the prices at which TSDISCOMs purchased the indicated materials, the prices paid by it are higher. It is not known whether the Hon'ble Commission has passed any appropriate directions in this regard to the APDISCOMs, as no details have been made public. Copy of a report, explaining how rates of transformers and other materials are inflated abnormally, published in Andhra Jyoti dated 27.10.2023, is enclosed. Comparison of prices paid by DISCOMs of a neighbouring state/states alone may not be sufficient to justify the prices being paid by APDISCOMs, because the purchases made by DISCOMs of some other states cannot be taken for granted as outcome of real competitive bids. Prices for materials concerned prevailing in the market in the year and period of purchase need to be ascertained for any realistic and objective comparison. In view of the very limited comparison of prices, we request the Hon'ble Commission to examine the entire process of how biddings are conducted, their terms and conditions, and purchasing the said materials by APDISCOMs and comparing prices prevailed in the market during the said year and prices paid for the same materials by power entities in other neighbouring states by calling for all relevant records from APDISCOMs and issue appropriate orders and make the details public so that the same can be examined by interested public to make their submissions during the public hearing on true-up claims for distribution business of the DISCOMs for the 4th control period and for the Commission for finalising MYT for distribution business for the 5th control period.

Reply: The reasons for increase in cost of materials was submitted to the Honourable APERC

19. The DISCOMs have projected their O&M expenses (in Rs. crore) year-wise for the 5th control period as hereunder:

DISCOM	2023-24	2024-25	2025-26	2026-27	2027-28	2028-29
SPDCL	3,351	3,309	3,660	4,222	4,605	4,959
CPDCL	1,459	1,606	1,784	1,994	2,230	2,473
EPDCL	2,489	2,835	3,248	3,757	4,303	4,836
				10.0	(a) (c) (v) (v)	

Compared to their O&M expenses for the last year of the 4th control period (2023-24), the projected O&M requirements of the DISCOMs for the last year of the 5th control period (2028-29) are higher by 67.57% for SPDCL, 58.99% for CPDCL and 95.38% for EPDCL. Since the components of O&M expenditure are being determined on normative basis, they need to be revised downwards as per relevant factors of capital investments to be approved by the Commission and assets approved to be created.

Reply: The licensee arrived O&M expenses after taking into consideration of factors such as inflation, pay revision & wage revision, future provisions towards pensions of APSEB origin employees, capital expenditure and previous years expenses.

20. The DISCOMs have shown value of asset additions during the 5th control period to the tune of Rs.64,922 crore - SPDCL Rs.27,572 crore, CPDCL Rs.15,438 crore and EPDCL Rs.21,912 crore. Compared to the projected capital investment of Rs.46,274 crore, the value of projected asset additions during the 5th control period is higher by 40.29%. It implies that backlog of the 4th control period also is going to be included in the asset additions during the 5th control period. It has various implications. In such a case, the capital investment should be less than what is approved by the Commission for the 4th control period. The wheeling charges fixed for that control period would turn out to be higher. The projected works under capital investment for the 4th control period also must have been inflated or they have not been required at the projected level for the same control period. If the projected works under approved capital cost are required during the 4th control period, it is clear that there has been deficiency in creating required assets during the same control period. It also indicates that there would be true-down for the 4th control period, unless there has been cost escalation exceeding the capital and non-capital expenditures approved by the Commission. In view of the same, there is need for effective and transparent prudence check of prices for materials and expenditures projected for the 5th control period, following serious concerns being expressed that they are inflated unrealistically and abnormally, to reduce the projected capital investment and value of asset additions for the 5th control period.

Reply: The projected asset additions during 5th control period are higher due to implementation of schemes such as RDSS involving smart prepaid metering for consumers and systems, loss reduction, system strengthening, agl DBT scheme etc., in addition to the regular capital investment to cater to the load growth.

21. For the 5th control period, while SPDCL and CPDCL have adopted the depreciation rates as per the guidelines of the Ministry of Power, GoI, EPDCL has adopted the same as per the rates notified by CERC. We request the Hon'ble Commission to consider the rates of depreciation of MoP, GoI, or CERC, whichever are lower, so as to reduce the burden of frontloading the tariff.

Reply: APSPDCL has been following the rates of depreciation as per the guidelines of the Ministry of power, Gol since its incorporation. The adoption of rates of depreciation of MoP, Gol or CERC, whichever are lower is within the purview of the Hon'ble APERC.

22. The DISCOMs have shown rates of interest on loans differently and at higher level. Weighted average rates of interest shown for the 5th control period by SPDCL range from 9.75% to 10.12%, those of CPDCL range from 10.8% to 11.7% and of EPDCL range from 9.08% to 11.24%. Though the DISCOMs highlight "financial assistance" from the GoI under Revamped Distribution Sector Scheme (RDSS), subject to achieving targets of operational performance by the DISCOMs within the stipulated time, the rate of interest being charged on loans granted by PFC and REC Limited is as high as 12.15%% on some of the loans granted by them. In other words, whatever "financial assistance" the DISCOMs may get from GoI under RDSS, a considerable part of it is taken back in the form of higher rates of interest being charged by its entities PFC and REC. We request the Hon'ble Commission to re-examine the projected interest rates and determine the same in a realistic manner in tune with interest rates prevailing in the market. Also, the Hon'ble Commission may direct the DISCOMs to resort to swapping of loans with high interest rates with fresh loans at relatively lower rates of interest to the extent available.

Reply: APSPDCL would like to clarify the rates of interest on loans are determined based on various factors, financial performance, risk profile, and the prevailing market conditions at the time of loan procurement. Additionally, the rates charged by financial institutions like PFC and REC Ltd are determined based on their own policies, market dynamics, and risk assessment.

The figures presented in our submission reflect the average rates for the 5th control period, taking into account the specific terms and conditions of each loan agreement. While the DISCOMs indeed benefit from financial assistance under RDSS, it's important to understand that interest rates charged by external entities like PFC and REC Limited are subject to their independent evaluation of risk associated with lending. The rates are not solely influenced by the quantum of assistance received by DISCOMs from the Government of India. APSPDCL will optimize debt portfolio by considering options such as loan swapping as suggested, with due consideration for feasibility and availability of lower-interest rate alternatives.

23. The DISCOMs have shown different rates of income tax. APCPDCL has shown a rate of 15%, while SPDCL has shown a rate of 17.47% and EPDCL a rate of 20%. Why different rates of income tax are being projected by the DISCOMs? Why cannot all the DISCOMs opt for the lowest rate of income tax? Moreover, since RoE @ 14% on 25% of regulatory rate base is being paid by the consumers as a part of tariffs, imposing the burden of income tax on RoE would be tantamount to penalising them for the amount they have already paid in the form of RoE. Moreover, rate of RoE has been and continues to be higher than the rate of interest. Income tax is to be paid by the entity or person who derives that taxable income, not by others. The amounts of RoE claimed by the DISCOMs and the rates of income tax shown by them make it clear that they afford to pay and bear the income tax, without passing it through to the consumers. Therefore, we request the Hon'ble Commission to dispense with this obnoxious and iniquitous arrangement by recording valid reasons in writing for deviating from the applicable regulation, or by incorporating a clause in the applicable regulation, that income tax on RoE and other taxable income of the licensees shall be borne by them only and shall not be allowed as a pass through to be collected from consumers, directly or indirectly.

Reply: The APSPDCL computed taxes on income @17.47 of RoE which is inclusive of surcharges. As the taxes on income are the legitimate expenses under the regulatory regime, the same shall be received from the consumers.

24. The DISCOMs have projected their revenue requirement (in Rs. crore) year-wise (net transferred to retail supply business) for the 5th control period as hereunder:

DISCOM	2023-24	2024-25	2025-26	2026-27	2027-28	2028-29
SPDCL	4,227	4,490	5,502	6,800	7,835	8,770
CPDCL	1,936	2,161	2,545	3,262	4,185	4,946
EPDCL	2,625	2,863	3,613	5,277	6,662	7,558

Compared to their revenue requirement for the last year of the 4th control period (2023-24), the projected revenue requirements of the DISCOMs for the last year of the 5th control period (2028-29) are higher by 207.47% for SPDCL, 255.47% for CPDCL and 287.92% for EPDCL. The DISCOMs have claimed wheeling charges to recover their entire projected revenue requirements with similar higher percentages of increase.

Reply: Already replied in earlier paras

25. The projected growth in requirement of energy and peak load and capital investment required for strengthening and expansion of the distribution system for the 5th control period are interlinked. Had the Hon'ble Commission given its orders on the long-term load forecast, procurement plan, etc., of the licensees for the 5th control period, that would have provided the basis for projections in the subject petitions and submissions to be made by interested stakeholders. Nevertheless, a realistic assessment and determination of these projections, expenditures and revenue requirements projected by the DISCOMs in the subject petitions by the Hon'ble Commission would lead to substantial reduction in capital investment, other expenditures and revenue requirement of the DISCOMs for their distribution business for the 5th control period. It would lead to substantial reduction in the wheeling charges proposed by the DISCOMs for the 5th control period.

Reply: As explained for the item No:4.

26. Compared to the targets of reduction of distribution losses for the 4th control period, the targets proposed by the DISCOMs for reduction of the same for the 5th control period indicate that they could not achieve the said targets for the 4th control period. It is strange that SPDCL has projected its distribution loss trajectory for the 5th control period, i.e., proposed reduction of distribution loss is less than what it proposed for the 4th control period, i.e., the percentage of distribution loss during the 5th control period is more than what was proposed by it for the 4th control period. Similar is the case with EPDCL. Though the DISCOMs have maintained that the Commission has "to exercise suitable caution and recognise the current level of performance of the licensee, before fixing up performance benchmarks," it is to be noted that the Commission fixed targets for reduction of distribution losses for the 4th control period marginally increasing the targets proposed by the DISCOMs themselves. For making the proposals for distribution loss reduction during the 5th control period, the DISCOMs have claimed that they have taken various steps to reduce losses and that based on the historical performance and the measures taken for loss reduction in the state. For the first four years of the 4th control period, EPDCL has exceeded the targets approved by the Commission at LT level, but lagged behind the targets at 11kv and 33 kv levels. SPDCL has not shown details of its performance during the 4th control period in reduction of distribution losses. "The historical performance and the loss reduction measures carried out" are found to be inadequate. Despite starting implementation of RDSS and to be continued during the 5th control period, the distribution loss reduction targets proposed by the DISCOMs for the 5th control period are not realistic and justifiable. It shows lack accountability on the part of the DISCOMs to improve their performance to the targeted levels, despite spending approved capital and non-capital investments for taking the proposed measures. The untenable contention implied in the submission of the DISCOMs is that their historical performance and measures taken for reduction of distribution losses are optimum. The trend of their inflating costs for materials and non-capital expenditure is not getting reflected in the trend of distribution loss reduction. This calls for a realistic and efficient prudence check and assessment of all applicable factors by the Hon'ble Commission. We request the Hon'ble Commission to take a realistic and holistic view of the factors concerned and fix targets appropriately for reduction of distribution losses during the 5th control period, making the DISCOMs accountable for the same.

Reply: The distribution losses of APSPDCL for 4th control period are not comparable to those projected for 5th control period due to bifurcation of APCPDCL from APSPDCL. The distribution losses projected are lesser than the losses for FY 2022-23.

27. Taking the above-mentioned points, among others, into consideration, we request the Hon'ble Commission to reduce capital and non-capital expenditures, revenue requirement and wheeling charges proposed by the DISCOMs considerably, besides determining the levels of different aspects of their performance objectively.

Reply: Already replies in earlier paras

28. One of the objectives of RDSS is reduction of the AT&C losses to pan-India levels of 12-15% by FY 2024-25. What are the AT&C losses of the DISCOMs at present? Will they be able to achieve the objective of reducing the same to 12-15% by next financial year? Since collection efficiency is one of the ingredients of the so-called AT&C losses, collection of accumulated dues of power bills, especially from the entities and departments of GoAP and local bodies, and dues of subsidy the GoAP has to pay turns out to be one of parameters for efficiency improvement. Affordability of power supply to consumers through a financially sustainable and operationally efficient distribution sector has its inherent limitations, because policies and directions of the GoI and GoTS, which are leading to increase in cost of generation and supply of power, are outside the purview of regulatory process. Since the Hon'ble Commission has been determining ARR of the DISCOMs, after factoring cross subsidy, tariff hike, etc., and subsidy the GoAP is agreeing to provide every year,

and allowing permissible true-up claims of the DISCOMs, it, in effect, is bridging the gap between ACS and ARR, and RDSS has nothing to do with it. The other works proposed under RDSS have to be taken up, even without RDSS, by the DISCOMs periodically even otherwise as a part and parcel of strengthening and expanding the distribution system. Will the DISCOMs get "financial assistance" from the GoI under RDSS, if they cannot achieve the stipulated objectives within the time limits fixed?

Reply: The DISCOM is striving to achieve the targets under RDSS

- 29. We would like to remind the Hon'ble Commission that, in our submissions dated January 31, 2022, on the ARR and tariff proposals of the DISCOMs for the year 2022-23, we submitted the following points:
 - "1. The Discoms have replied that they have submitted ARR filings to the Hon'ble Commission as per the direction of the GoAP given in GO Rt.No.161 dated 15.11.2021. However, the Discoms have not explained the purpose for which the GoAP has given the direction to them to submit tariff proposals to the Hon'ble Commission without taking into account any Government subsidy; nor have they responded to the points raised by me. When I have pointed out that the real purpose of that direction of the GoAP is to implement the direct benefit transfer (DBT) scheme being advocated by the Modi Government at the Centre, the Hon'ble Chairman, Justice C V Nagarjuna Reddy garu, has asked me as to why the DBT system is objectionable. As submitted during the public hearing, I am giving my views on the issue hereunder:
 - a) It is proposed by the GoI in the amendments to the Electricity Act, 2003, that consumption of electricity by the consumer shall be metered and charges shall be paid in accordance with the tariff determined by the appropriate Commission and that where the State Government or any other agency (and the Central Government also) proposes to provide any subsidy to any category of consumer, it shall be through direct benefit transfer. This kind of arrangement would affect the interests of the hitherto subsidised consumers.
 - b) In States like Andhra Pradesh and Telangana where the scheme of free supply of power to agriculture, without metering pump sets, is being implemented, the proposed change of collecting charges from them and paying subsidy through direct transfer to their Bank accounts would invite strong resistance from the farmers, leading to social turmoil. The consequences of such social unrest will have to be faced by the State Government, with the Government of India taking no responsibility and accountability for the same.
 - c) It will complicate the entire process and increase the work burden of the distribution licensees and the State Government. For DBT, the Government has to make arrangements for opening bank accounts of the subsidised consumers in the entire State and collecting and maintaining that information. They have to verify the power bills issued by the Discoms every month and work out the amount of subsidy to be provided to every subsidised consumer based on his/her consumption shown in the power bill. Compared to the present arrangement of paying agreed subsidy in twelve equal monthly instalments in advance to the Discoms directly by the Government, the DBT will be problematic, saddling the Govt., the subsidised consumers and the Discoms with avoidable work and risks. Instead of providing the subsidy amount directly to the Discoms, as has been the standard practice over the years, what benefit is going to accrue either to the Government, or the Discoms, or the agricultural and other subsidised consumers, through this circuitous arrangement of depositing subsidy amount in the individual accounts of the farmers and other subsidised consumers and then transferring that amount to the Discoms by the Government is inexplicable.
 - d) If more power is supplied to agricultural consumers, exceeding the quantum determined by the Commission for a particular financial year, the Govt. is providing additional subsidy. In the case of other subsidised consumers, if their consumption exceeds, for the excess consumption, with

no provision of cross subsidy and Government subsidy, additional burdens are being imposed on them in the form of true-up claims of the Discoms on par with subsidising consumers. If subsidy is provided under the DBT, the Government will have to provide additional subsidy to the subsidised consumers, even for their excess consumption based on their monthly bills. If such is the lofty purpose with which the Government wants to implement the DBT, it can provide additional subsidy to additional consumption of subsidised consumers by dispensing with the system of true-up/true-down and permitting the Discoms to include their variations in expenditures and resultant revenue gap of a financial year in the ARR of the next financial year. We have already submitted this proposal to the Hon'ble Commission, giving detailed reasons therefor.

- e) The very purpose of free supply of power to agriculture and some categories of consumers and subsidised supply of power to some other consumers like the lower slabs in the LT domestic and commercial categories is that, as a part and parcel of redistributive social justice, and as the said consumers cannot afford to pay power tariffs without subsidies, the present arrangement is being implemented. That is the purpose why cross subsidy also is being provided to the subsidised consumers. If cross subsidy is discontinued as is being proposed by the Gol, for free supply of power to agriculture, the entire cost will have to be borne by the GoAP as subsidy either under the present arrangement or the proposed DBT, or tariffs will have to be determined and imposed.
- f) If agricultural consumers of power and other subsidised consumers have to pay power bills every month as per cost of service, which is more than Rs.7 per kwh, it will be very difficult for them to pay such higher amounts. In such a situation, if the State Government does not transfer subsidy in time to the accounts of the subsidised consumers, the latter will continue to be saddled with the burden of higher power tariffs. If such consumers cannot pay higher tariffs, will their services be disconnected by the Discoms? If the Discoms won't disconnect such services, the dues will get accumulated, forcing the Discoms into financial problems. If they disconnect such services, the consumers will face difficulties.
- g) The Discoms have submitted that they are receiving tariff subsidy amount regularly from the Govt. of A.P for the current financial year 2021-22. They have also informed that they are trying to get the old dues of subsidy from the GoAP. If the GoAP provides the subsidy it agrees to provide regularly and in time, there will be no problem to the Discoms. If GoAP does not provide the agreed subsidy accordingly, the Discoms face financial problems. Under the DBT, if the GoAP does not provide the agreed subsidy to the consumers concerned directly, the latter will face problems. Therefore, the root cause of the problem is in not providing the agreed subsidy by the Government, whether it is to the Discoms or to the consumers concerned. If the Govt. honours its commitment to provide subsidy as agreed by it, under the present arrangement of factoring the same in the tariffs and providing to the Discoms directly, there will be no problem and there will be no need for the DBT scheme. If the Govt. does not honour its commitment to provide subsidy to the consumers directly, the proposed DBT system cannot prevent or resolve the problem arising from the failure of the Government.
- h) As already noted, the Discoms have to receive thousands of crores of Rupees from the GoAP towards subsidy and the dues include subsidy to be provided to SC and ST consumers also. In other words, where DBT system is already being implemented by the Government to certain categories of consumers, dues of subsidies are continuing. The Government is flouting its own decisions and commitments with impunity. There is no guarantee that such a situation will not recur and continue in the case of other consumers for whom the Government proposes to implement the DBT system.
- i) If the Government does not provide the subsidy it agrees to provide to consumers of its choice directly to the Discoms under the present arrangement, the Discoms will be in trouble for delay in getting the subsidy amount. Under DBT, if the Government does not provide the subsidy it

agrees to provide to consumers of its choice – it need not even convey the same to the Commission – the subsidised consumers will be in trouble; it will be difficult for them to continue to pay full cost recovery tariffs to be determined by the Commission. In other words, the burden and problems that may be created due to failure of the Government to provide the subsidy it agrees to will be shifted from the Discoms to the subsidised consumers under the DBT system.

- After factoring cross subsidy, the Hon'ble Commission is determining the tariffs for different categories of consumers and getting a written commitment from the Government on subsidy it agrees to provide to consumers of its choice and based on that final tariffs are being determined in the retail supply tariff order. Despite the direction of the Commission to provide the agreed subsidy in twelve equal monthly instalments in advance to the Discoms, dues of subsidies are getting accumulated. Since its inception, APERC has been consistently taking the stand that, if the Government does not provide the subsidy it agreed to provide, the Discoms have to collect that subsidy component also from the subsidised consumers concerned. Such a stand of the Commission indicates, directly or indirectly, that the Government can flout its commitment on providing subsidy given to the Commission in writing and that nothing can be done about such dishonouring of the commitment of the Government. If such is the position, even when the Government flouts its commitment on subsidy given to the Commission, under the DBT system, even without any such commitment, what would be the approach of the Government is anybody's guess. That is the reason why we have already suggested to the Hon'ble Commission to get the written commitment of the Government on providing subsidy to consumers of its choice in a legally binding manner.
- k) In G.O. Rt. No.161, dated 15.11.2021, the GoAP requested APERC "to notify the unit wise Government subsidy for different consumer categories as part of annual tariff order from the next financial year i.e. FY 2022-23 onwards." Unless the GoAP conveys its commitment to provide subsidy to consumers of its choice, the question of the Hon'ble Commission taking the same on record and into account for the purpose of determining tariffs and notifying unit-wise Government subsidy to the consumers concerned in the annual tariff order does not arise. If the Government wants to implement the DBT system, there will be no need to convey to the Commission the quantum of subsidy it wants to provide to consumers of its choice. Based on the monthly power bills of the subsidised consumers, the Government will have to transfer the subsidy amount to their bank accounts directly. In other words, under the DBT system, the Hon'ble Commission will have no role to play as far as subsidy to be provided by the Government to consumers of its choice is concerned. If the pros and cons of the DBT system are analysed carefully, the demerits of the system outweigh its merits. For these reasons, among others, being gung-ho and going in for the DBT system is unwarranted."

Our submissions made in response to the question of the Hon'ble Chairman were not incorporated in the tariff order for 2022-23. However, the Hon'ble Commission responded in the RSTO for 2022-23 thus: "As regards the metering of the aricultural services, it is the policy of the GoAP to channel the agriculture subsidy through Direct Benefit Scheme (DBT) mode by metering all the agriculture services. In this regard, the government has committed itself to bear all the costs associated with the metering. APSPDCL has already approached the Commission for approval of the investment proposal to provide smart meters for all the agriculture services in its area. The Commission has examined the proposal in depth and identified certain short falls in the implementation of the scheme like whether the smart meter technology is mature enough for wider deployment, recent news on the technical problems experienced with the integration of smart meters, etc., and accordingly sought some clarifications from APSPDCL and directed it to proceed further meanwhile" (pp 244-245).

Reply(29 a to k): The Honourable APERC after examining the request of APSPDCL for approval of investment proposal regarding "YSR Uchita Vyavasaya Vidyut Pathakam" to implement DBT scheme of fixing smart meters to agricultural pump sets has stated as follows.

"The GoAP has come forward to bear the expenditure for fixing smart meters to agricultural connections. Since no burden is passed on to DISCOMs and consequently to the consumers, approval of APERC is not necessary."

Based on the monthly consumption, agriculture subsidy amount will be credited to the farmer's bank accounts and intern the same amount will be transferred automatically to DISCOM's Account under Direct Beneficiary Transfer (DBT) Scheme. The cost of the project will be borne by the GoAP in the form of subsidy along with electricity bills and there will be no burden on the farmers. As per the RDSS guidelines, to meet the Pre-Qualification requirements subsidy has to be paid by the Govt., in advance per every quarter.

The Government vide G.O.Rt.No.67, dt.21.06.2023, has issued revised Administrative Sanction for Rs. 4068.08 Crores for installation of Smart Meters and allied materials to the 11 Lakh Agriculture pump sets in APSPDCL.

- 30. In our submissions dated January 3, 2023, on the ARR and tariff proposals of the DISCOMs for the year 2023-24, we have made the following points:
 - "1. It is reported that the GoAP has decided to install pre-paid smart meters to about 1.89 crore power consumer services in the state in a phased manner and complete the process by March, 2025, under revamped distribution sector scheme (RDSS). The special chief secretary, department of energy, has announced (2.1.2023) that the cost of the pre-paid meters would be collected from the consumers and that works worth Rs.13,252 crore would be taken up under RDSS out of which around Rs.5480 crore would be given as grant by the government of India, subject to installation of pre-paid meters. There is no explanation as to what benefit would accrue to the consumers on account of installing pre-paid meters. Moreover, the cost of smart meters would be collected from the consumers, the special CS has announced. In other words, with its usual approach of being more loyal than the king to whatever the Gol dictates, the Jaganmohan Reddy government is implementing this programme, unmindful or irrespective of its implications. We request the Hon'ble Commission to consider the following points, among others:
 - 1. This move is to be seen in the background of the so-called reforms being imposed on the states by the Modi government for privatising power sector, and in conjunction especially with privatisation of power distribution and implementation of the direct benefit transfer (DBT) scheme. Implementation of RDSS, including installation of pre-paid meters, is to benefit the private operators, who will be permitted to take up power distribution in areas of their choice, as proposed by the Gol.
 - 2. It is obvious that, the purpose of installing pre-paid meters is to force the consumers of power to pay in advance for power to be consumed by them, contrary to the standard practice over the decades of paying power bills monthly/bi-monthly for the power consumed by them. What is wrong with the present post-paid arrangement and what is the benefit and to whom with pre-paid arrangement under the proposed smart meters is left unexplained by its sponsors.
 - 3. As proposed by the Gol, private operators will be permitted to use the existing transmission and distribution networks of the DISCOMs of the government, paying some nominal rentals for carrying on their distribution business. In other words, they need not invest the amounts required for establishing their own distribution network, make arrangements for its maintenance, etc.
 - 4. Allowing private operators to use distribution network of the DISCOMs or rather, forcing the DISCOMs to allow private operators to use their network on lease, with DISCOMs themselves maintaining the network, is nothing but forcing the latter to lose a considerable part of their business, especially cross-subsidising component, to private operators, who get the opportunity to cherry-picking. Will the GoI apply this Tuglaquian approach to allow utilisation of such

networks of private companies in this manner, for example, utilising the network of private telecom companies by others?

- 5. The protagonists of pre-paid meters are arguing that pre-paid arrangement is there for cell phones. Then, why not similar arrangement for power consumption also, they ask. First, there is post-paid arrangement for cell phones and landlines. Second, under pre-paid arrangement for a specific period, there is no limit on number of calls that can be made. In the case of power consumption, consumers have to pay for the entire power they consume in a month; they are not allowed to consume any number of units of power during a specified period, pre-paying a specified amount.
- 6. The DISCOMs have a grace period of one month to pay bills to generators/suppliers of power for the power supplied by them and even rebate if they pay before the grace period. Under the existing arrangement, consumers are being given a period of 14 days from the date of issuing the bill for paying their bills for power consumed by them in a month. If payment of monthly bill is delayed, exceeding the due date, penalty is being collected by the DISCOMs, besides disconnecting the service. Moreover, all the permissible expenditure and return on equity for supplying power to consumers from the point of generation to end point is being passed through in the form of tariffs to be paid by the consumers. When such is the case, why should the consumers be forced to pay in advance for power to be consumed by them under the arrangement of pre-paid meters?
- 7. As per Regulation 6 of 2004 of APERC, "security deposit amount shall be two months charges in case of monthly billing and 3 months charges for bi-monthly billing." In addition to collecting such a security deposit from the consumers, the DISCOMs also are collecting additional security deposit whenever the consumers exceed their contracted load. Then why should the consumers be forced to pay in advance for power to be consumed by them under the arrangement of prepaid meters?
- 8. Payment in advance for power to be consumed by the consumers is nothing but providing investment for private distribution company to purchase of power. Private distribution companies need not take loans for their working capital and they can retain the amount paid in advance by the consumers and use as they like till they have to pay for power purchased by them from generators/suppliers. In other words, private operators of distribution need not invest any amounts for developing and maintaining distribution network and for purchasing power. Arrangement of pre-paid meters is intended for bestowing this undue benefit to private operators.
- 9. The works proposed to be taken up under RDSS need to be, and are being, taken up by the DISCOMs as a part and parcel of expanding, strengthening and maintaining their distribution network. For that no conditionalities, as imposed under RDSS, are required. The grant component under RDSS is a ruse to impose conditionalities like installation of pre-paid meters to ensure undue benefits to private operators of distribution of power.
- 10. Whatever money the DISCOMs spend for purchasing and installing pre-paid meters is nothing but squandering public money, whether it is collected from the consumers concerned or spent from the grant under RDSS. The consumers have already spent their money for their existing meters. Forcing them to pay for pre-paid meters is nothing but imposing additional burden on them without any benefit to them.
- 11. The scheme of pre-paid meters benefits their manufacturers. Experience in power sector, as elsewhere in other sectors, shows that terms and conditions of bidding can be manipulated to select bidders of their choice by the powers-that-be. Bidding procedures and terms and conditions issued by the GoI have been found to be wanting in ensuring transparency and fair play, going by the way crony capitalism is being promoted and pampered. It is reported that

crony capitalists, who have been promoted and pampered by the Gol, are entering into manufacturing of pre-paid meters.

- 12. Though it is announced that pre-paid meters would be installed for the service connections of consumers whose monthly consumption is more than 200 units, it will be extended to all the consumers gradually.
- 13. There will be practical problems to consumers for paying in advance for power to be consumed by them under the system of pre-paid meters. How much amount and how many times they have to pay in a month, keeping track of their consumption recorded in the pre-paid meter to avoid disconnection and mode of such payment will be problematic to the consumers.
- 14. Under smart pre-paid meter, if a consumer does not pay after the existing balance exhausts, his service connection will be disconnected automatically. If a consumer does not pay power bill before due date under the existing post-paid arrangement, his service will be disconnected. The DISCOMs are unable to disconnect service connections of offices of the government and its instrumentalities and local bodies, whatever be the reasons. Even under pre-paid meter system, there is no guarantee that the DISCOMs would not come under pressure not to disconnect services of offices of the government, its instrumentalities and local bodies for their default in paying power bills. It is ironical that the GoAP, which is failing in getting power bills paid by its offices, its instrumentalities and local bodies in time and itself failing in paying the committed subsidy to the DISCOMs in time, has decided to install pre-paid meters to service connections of power consumers. Though the Hon'ble Commission has directed the DISCOMs to disconnect service connections of the offices of the government, etc., when they fail to pay the bills in time, the DISCOMs have not been in a position to comply with the direction. The DISCOMs have replied that "the financial losses are mainly due to the non-receipt of the Govt. dues. That disconnection notices have been issued to all the Govt. department offices & local body offices for collecting the C.C. Charges arrears from them (pp 233-234 of RSTO for 2022-23). Only notices and no further action!"

Reply 30 (1 to 14): The licensee has proposed smart meters in view of the following advantages

- > Meter readings will be taken online on scheduled monthly dates
- > Accurate billing will be done
- Consumers can closely track their usage and spend
- No unpaid bill because energy is prepaid

At present there is no proposal to extent installation of smart meters to consumers with consumption below 200 units.

These submissions also are not incorporated in the retail supply tariff order for 2023-24. However, the Hon'ble Commission has stated in the RSTO for 2023-24 that "the merits/demerits of the DBT scheme formulated by the Government are not part of this proceeding while on the other hand the Government and the DISCOMs are clarifying that there will not be any burden on the DISCOMs or farmers because of the implementation of DBT" (page 134). In which proceedings will they become a part?

- 31. If expenditure relating to installation of smart meters to agricultural service connections is not going to be collected from the consumers, as is being contended by the DISCOMs and reiterated by the Hon'ble Commission, implying that it is not within the purview of the Commission as far as the said expenditure is concerned, there is no point in showing the estimated expenditure for that purpose in the investment plans of the DISCOMs. There is no need to consider that expenditure as a part and parcel of the capital expenditure to be approved by the Hon'ble Commission for the control period concerned.
- 32. Whatever be the views expressed by GoI, GoAP, the DISCOMs and the Hon'ble Commission, the said initiatives would facilitate implementation of the DBT scheme, along with metering of

agricultural services and pre-paid metering of other services, and there is no guarantee that the above-articulated adverse consequences would not follow as a result. By meekly submitting itself to the diktats of the Modi government, the Jagan Mohan Reddy government in Andhra Pradesh is paving the way for debilitating APDISCOMs to serve interests of crony capitalists and imposing more avoidable burdens on the consumers of power at large, as explained above.

- 33. We request the Hon'ble Commission to consider the above-mentioned points, among others, and take appropriate decisions before finalising MYT orders on the subject petitions. We request the Hon'ble Commission to permit us to make further submissions during public hearings after receiving and studying responses of the DISCOMs.
- 34. I request the Hon'ble Commission to provide me a link to enable me to participate in the public hearings from Hyderabad through virtual mode on the subject issues of all the three DISCOMs.

Further, it is to inform that, the Honorable APERC is conducting public hearings on ARR filings for FY 2024-25 & Distribution Business for 5th control period through video conference from Conference Hall, APEPDCL, Visakapatnam. The hearings will be held in respect of all the three DISCOMs on 29-01-2024, 30-01-2024 and 31-01-2024 from 10.30 AM to 1.00 PM and from 2.00 PM to 4.30 PM. APSPDCL has facilitated Video Conference at all offices of Superintending Engineer / Operation at district headquarters and at all remaining offices of Executive Engineer / Operation. Specification of the date and time for objector is under the purview of Honourable Commission.

Yours faithfully

Chief General Manager / RAC & IPC
